DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on January 10, 2002. It is noted, however, that applicant has not filed a certified copy of the Japanese application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-3 and 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitations "the tip" in line 3, "the inner part" in line 4, and "the center" in line 6. There is insufficient antecedent basis for these limitations in the claim.

Claim 2 recites the limitation "this cylindrical hole" in line 2. The antecedent basis for this limitation is unclear as there are two such holes. Claim 2 further recites "the bottom side" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 3 recites the limitations "the tip" in line 3, "the inner part" in line 4, and "the center" in line 8. There is insufficient antecedent basis for these limitations in the claim.

Claim 5 recites the limitations "the tip" in line 3, "the inner part" in line 4, "the center" in line 7, and "the retainer" in line 8. There is insufficient antecedent basis for these limitations in the claim.

Claim 6 recites the limitation "the cutout end" in line 6. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-5, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 5,967,923 to Petri.

Petri discloses a hydraulic tensioner with a metallic cylinder 3 fitted to a cylindrical hole 7 formed in a body 1, a plunger 4 provided within the cylinder, a compression spring 13, and a pressure oil chamber 12 formed between the inner part of the plunger and the cylinder. The cylinder has a bottom plate 6 with a through hole, visible in Figure 1. The bottom plate is engaged by the spring. The cylindrical hole has a smaller hole, visible in Figure 1 below a check valve abutting the bottom plate. The check valve comprises a ball 11, a lid, and a spring supported by the bottom plate via the lid, or retainer, as seen in Figure 1.

In reference to claims 4, 7, and 8, Petri discloses the structure of the claimed invention. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. See MPEP § 2113. Petri

discloses the lid, regardless of its being preliminarily assembled. The cylinder is disclosed as being steel in column 2, lines 17-20.

6. Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 6,120,402 to Preston et al.

Preston et al. disclose a hydraulic tensioner with a metallic cylinder 20 fitted to a cylindrical hole formed in a body 104, a plunger 2 provided within the cylinder, a compression spring 4, and a pressure oil chamber 22 formed between the inner part of the plunger and the cylinder. The cylinder has a bottom plate with a through hole 24. The bottom plate is engaged by the spring. A ratchet pawl body 12 engages teeth 11 on the outside of the plunger by spring 68 engergization, a cutout 15 for rocking the pawl and a pair of protruding pieces 90, 88 are formed on the cylinder, and the pawl is supported by a shaft 86 in mount holes formed in the protruding pieces and a mount hole formed in the body 104.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art includes several tensioners with plungers mounted within cylinders in the tensioner body, the plunger and cylinder defining a pressure oil chamber and having a ball check valve.
